Hum. Mol. Genet. 4:1097-1099(1995).

Hum. Mol. Genet. 4:1097-1099(1995).

-i-FUNCTION: Could act as a modulator of transcription.

-i-FUNCTION: Could act as a modulator of transcription.

Expressed at low level in thyroid. Not detected in tonsil, colon, lung, spleen, prostate, kidney, striated and smooth muscles.

Dispute a prostate, kidney, striated and smooth muscles.

Could act and especifically found in more than 80% of detected in mesenchymal and epithelial cell lines. Not detected in mesenchymal and epithelial cell lines.

Couls act and produces the SSXT-SSX1 or SSXT-SSX2 fusion products. These hybrid proteins are probably responsible for transforming activity, Heterogeneity in the position of the breakpoint can occur (low frequency).

Couls all MILARITY: Contains 1 KRAB-related domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        colon,

BAZE N., ROSALÍ M., ROCCHÍ M., Marino M., Archidiacono N., Franze N., Rosatí M., Rocchí M., Ballabio A., Grimaldí G., Submitted (AUG-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: May be involved in transcriptional regulation.
-!- SUBCELLULAR LOCATION: Nuclear (Potential).
-!- SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-
Patrosso C., Frattini A., Lucchini F., Repetto M., Sacco M.G., Zoppe M., Vezzoni P., "ZNF75: isolation of a cDNA clone of the KRAB zinc finger gene subfamily mapped in YACs 1 Mb telomeric of HPRT."; Genomics 18:223-229(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C2H2-TYPE 1.

                                                                                                                                                                                                                                                           available;
--- TISSUE SPECIFICITY: Expressed in all tissues examined. The highest level expression was found in the kidney and testis.
---- PIM: EGF stimulates phosphorylation on Tyr-residues.
---- SIMILARITY: Contains 1 EH domain.
---- SIMILARITY: Contains 1 EF-hand calcium-binding domain.
---- SIMILARITY: Sef. 3 sequence differs from that shown due to a
                                                                                                                                  GRB2. Binding to RALBP1 does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to am EGS-responsive tyrosine kinase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  receptors and Ral-GTPases (By similarity).
-!- SUBUNIT: Homodimer (Potential). Interacts with RALBBI, CRK and GRB2. Binding to RALBBI does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to an EGF-responsive tyrosine kinase (By similarity).

Res. Toxicol. 11:1145-1153(1998).
-!- FUNCTION: This protein is involved in the oxidative metabolism of a variety of xemobiotics such as drugs and pesticides.
-!- CATALYTIC ACTIVITY: N,N-dimethylaniline + NADPH + O(2) = N,N-dimethylaniline + NADPH + O(2) = N,N-dimethylaniline N-oxide + NADP(+) + H(2)O.

Dev. 49:23-36(1995).
-!- FUNCTION: May function as switches in neuronal development.
-!- SUBCELULAR LOCATION: Nuclear.
-!- TISSUE SPECIFICITY: Low level expression is seen in undifferentiated proliferating calls of neural epithelium. A greater expression is seen in the maturing neurons after they leave the neural epithelium. It is also found in the gut epithelium and adrenal medulla.
-!- SIMILARITY: Contains 1 HMG box domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Isolation of cDNAs encoding finger proteins and measurement of the corresponding mRNA levels during myeloid terminal differentiation."; Nucleic Acids Res. 16:427-4237(1988).

-!- FUNCTION: INVOLVED IN CELL DIFFERENTATION AND/OR PROLIFERATION.
-!- SUBCELLULAR LOCATION: Nuclear (Potential).
-!- SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pannuti A., Lanfrancone L., Pascucci A., Pelicci P.G., la Mantia G.,
